# Design System, the foundation for high-level automation

Marko Klemetti  
CTO

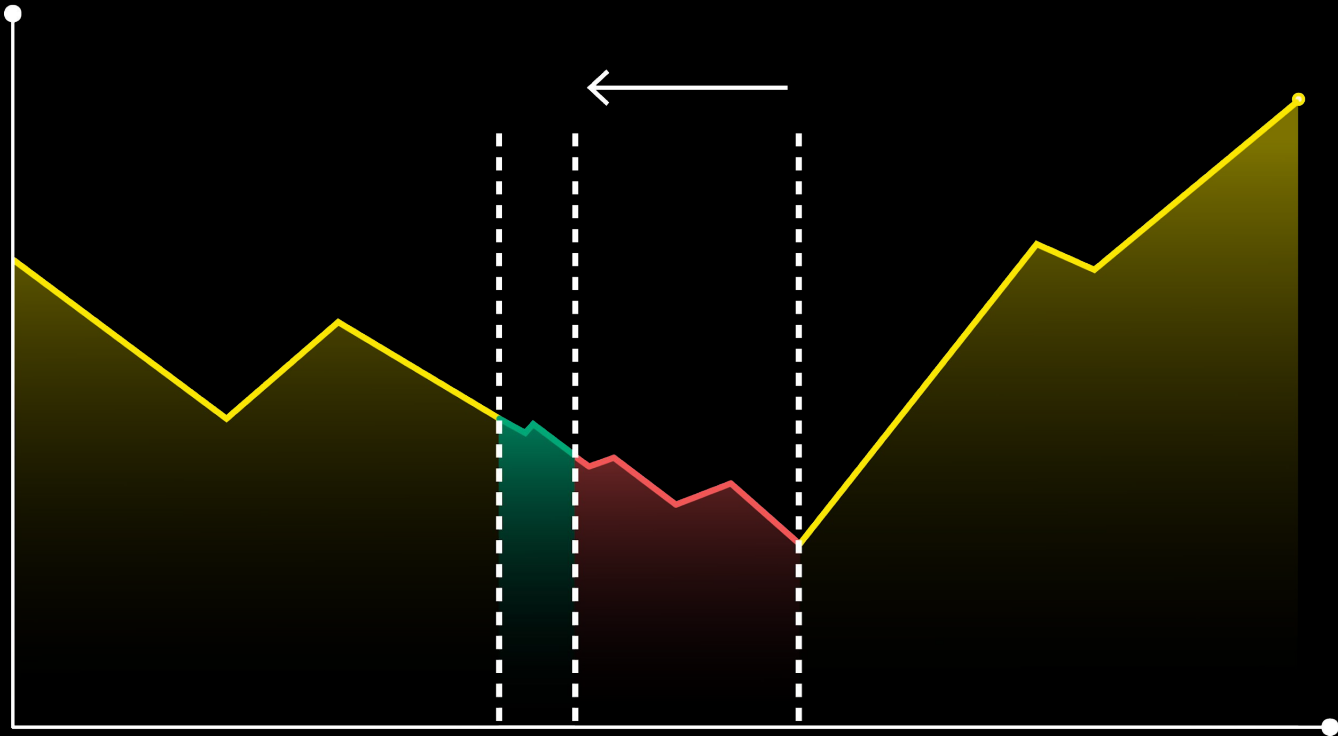

eficode

# **From weeks to seconds using Continuous Deployment**

# Towards 0-day delivery

eficode

**Design and Devops  
are moving closer  
together**

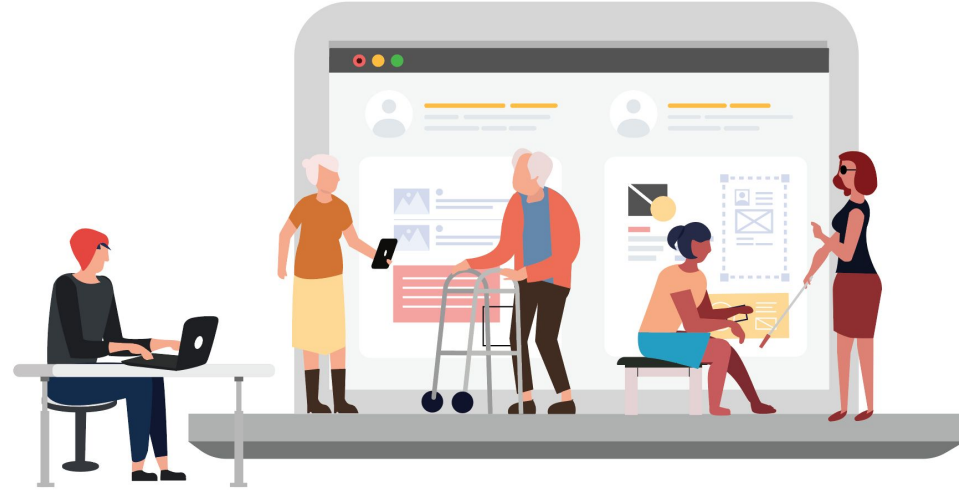

eficode

**Cloud is mainstream  
and has evolved into  
self-services**

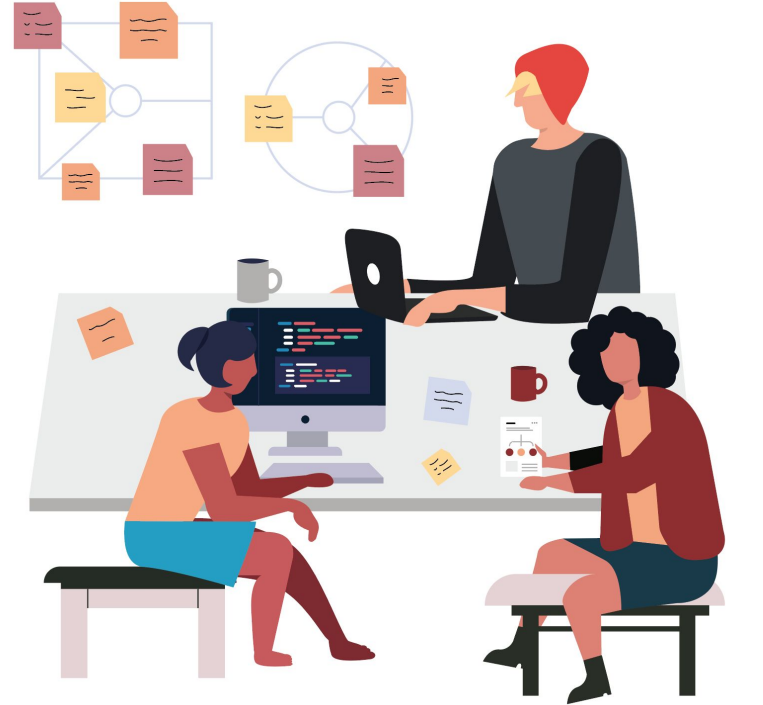

# Why Design Systems are Popular Today?

- Uniform voice, identity and styles
- Kickstarting new innovations faster and with existing assets
- Updating applications across organization with new features
- Scaling by distribution; teams work on a single system instead of all on their own

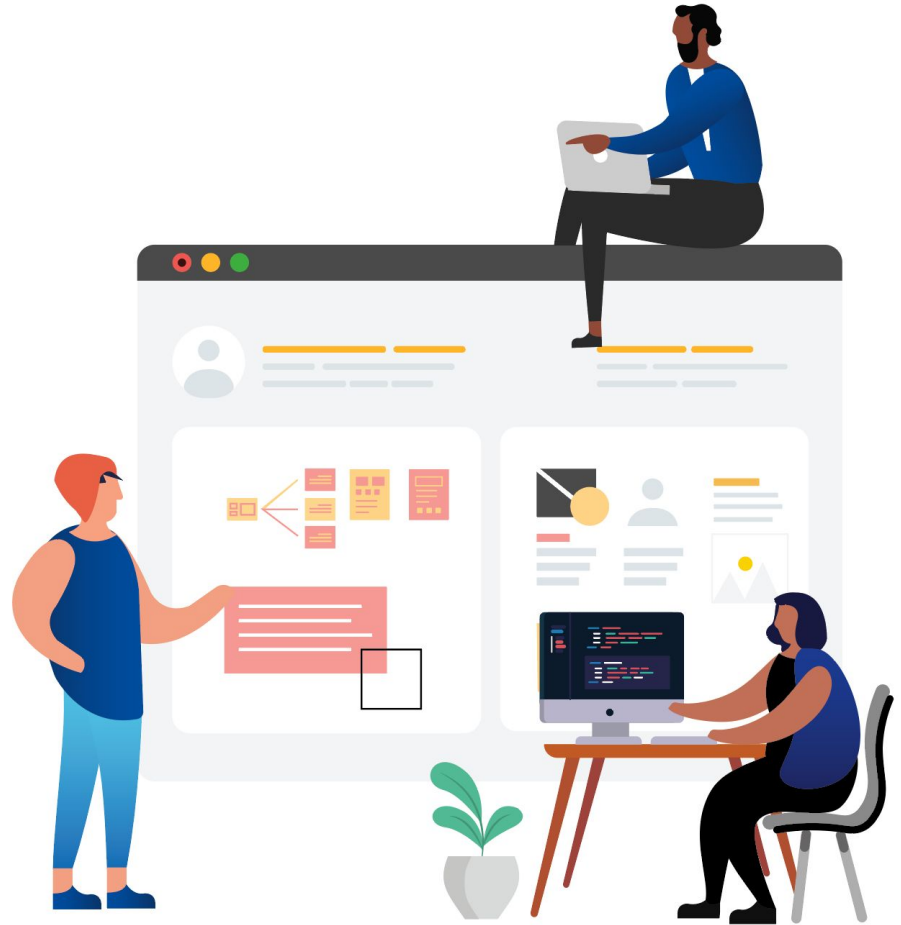

# What modern Design Systems (usually) lack?

- Practices to develop, implement and share the design system
- Tested code components for selected technologies
- Acceptance test templates and keywords
- Connection to delivery pipeline
- Support for modern practices like pull requests, security audits and linting

# Demo

A grayscale photograph of a group of people sitting around a table in a meeting room, looking at documents. The image is dimly lit and serves as a background for the text.
